IMPORTANTS OF SMALL SCALE INDUSTRIES

- Small scale industries (SSI) play a vital role in the development of economy. It based on agriculture and agro based sector.
- Job opportunities:**
SSI is second largest industry which creates huge employment opportunities. Because it can be operated with minimum amount of capital. SSI can run with basic and potential skills. This is a boost for a labour surplus country like India.
- Regional balance:**
In India all regions are not developed due to lack of industrialization. SSI can be set up with minimum amount of capital. Small industries manufacture products using simple technologies, local available resources, material and labour. Thus they contribute significantly to the balanced development of the country.

- Increase competitive strength:**
Small scale industries enjoy the advantages of low cost of products. These industries use locally available resources which are less expensive. Establishment and running costs of small industries are comparatively less. Low costs of production, less overheads, ultimately result in low price of goods. Increased turnover increase competitive strength.

Small scale industries can create a large number of employment in rural areas. Small scale industry is also a best example of self employment. Therefore migration of people from rural area to urban area can be reduced.

SUPPORT TO LARGE SCALE INDUSTRIES

Maximum large scale industries depend upon small scale industries. Many small scale industries provide raw material, semi finished goods to large scale industries for e.g spare parts.

Developing new Entrepreneur:

Small enterprises have the potential to attract the young aspirants to entrepreneurship. Small scale industry can accommodate the technical and non-technical young first generation entrepreneurs. India is the country of villagers therefore government has to pay attention to the development of small and cottage industries in order to create a balanced economy.

ADVANTAGES OF SMALL SCALE INDUSTRIES

- Large Employment:**
Small industries have potential to create employment opportunities on a mass scale. They are labour intensive they use more labour than other factors of production. Their gestation period is low and can provide employment opportunities to large number of people.

• **Less capital Requirements:**
SSI requires less capital as compared to large scale Industries. SSI can be started and run by small entrepreneurs with limited capital resources.

• **Increases Industrial output:**
SSI produce consumer goods as well as industrial components. The goods are cheaper and satisfy the needs of poor sections of the society. Products produced by SSI form a significant portion of industrial output of a country.

• **Utilization of Domestic Resources:**
SSI make use of local resources which are available in a greater extent. Small amounts of savings which normally remains idle are now channelized. This will increase capital formation and investment in the economy.

• **Cost Efficiency:**
Small scale units can adopt micro production method which offer better quality and more variety at a lower cost. They are most effective as compared to large scale, because their expenses are lower.
